

Coding Solutions for Egg Packagers

Life can be tough for egg packaging companies.

Along with all the usual demands, traceability is becoming an important issue- so reliable coding systems are a must.

Here at ID Technology, we have years of experience in providing both inkjet and laser coding solutions to egg producers in many parts of North America.

Citronix Continuous Inkjet (CIJ) printers are used to print directly onto eggs (using FDA approved food-grade inks) as well as onto various types of egg packaging materials.

Macsa Laser Coders from ID Technology can print high quality text and barcodes onto packaging and directly onto the eggs themselves.

With traceability of all food products becoming more important, being able to code products and packaging with high quality, accurate text and barcodes is critical.

ID Technology has solutions for egg producers that cover all the requirements for a coding and traceability solution, for each level in the product/packaging hierarchy.

Coding Direct to Product

ID Technology has two solutions for printing quality marks directly to delicate eggs. Both are non-contact, so there is no danger of any damage to the product.

Citronix CIJ inkjet printers are well known in the industry for being the simplest to operate and maintain, and for their great print quality.

For direct to food applications, FDA approved food-grade inks are used.

Macsa Laser Coders use nothing but light to produce a high quality image on the products. With no consumables to purchase, laser coders provide exceptionally low operating costs.

Coding Egg Cartons

Regardless of whether the cartons are made from pulp, foam or plastic, our CIJ and laser coders can produce high quality durable codes.

Shipping Cases

For identification of shipping cases with text, graphics or barcodes, ID Technology provides label and inkjet solutions.

Our **Foxjet** high resolution printers produce high quality prints with barcodes that scan every time.

Need high density GS1 128 barcodes?

ID Technology labeling systems are ideal for printing and applying GS1 barcode labels at high speeds. We can print & apply labels to your pallets as well.

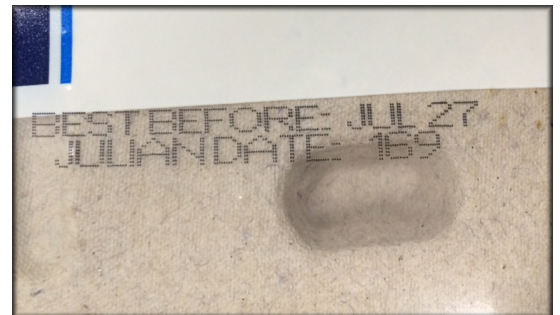

With 6 regional label manufacturing facilities, we can make sure your equipment & labels are perfectly in sync.

ID Technology has nationwide coverage with knowledgeable sales and service support right in your area.

Need to upgrade traceability for your egg products? Contact ID Technology today!
