## Top 10 Reasons To Buy The New High Speed Wipe-On Labeling Module

Why is ID Technology's new application module a great solution for printing & applying GS1 barcode labels to your cases and trays? Here are 10 good reasons:

1. Simple design with no adjustments or moving parts – maximum uptime with minimal maintenance. No plant air needed.
2. Best print quality without compromising output - achieve ANSI A & B barcode grades. By decoupling the print speed and conveyor speed, maximum output is achieved while using low print speeds. Enhanced print quality, longer printhead life and less overall wear on the printer.
3. Proven OEM print engines – use existing label files without emulation, widely available parts and support. Multiple print resolution choices – what's best for your needs? 203, 300, 400 or 600 DPI printers can be specified.
4. Industry standard printheads – longest printhead life; especially when using low cost direct thermal labels. No need for expensive near edge compatible ribbon.
5. Ultimate flexibility – thanks to modular design, the wipe module can be replaced with any IDT application module. Need to switch to front panel labeling or corner wrap? No need to replace the labeling system, just install the appropriate application module.

6. Backward compatible for 250 and 252 labelers – no need to replace your existing ID Technology labeling equipment, the Wipe Module can be installed on any IDT label printer applicator in a matter of minutes
7. The label is under gentle control for the entire printing and labeling sequence – correctly applied every time, no skewed or creased labels.

8. The module slides away from the printer in seconds- quick and easy access for label/ribbon threading and for cleaning the printer.
9. ID Technology labels – IDT is a major manufacturer of pressure sensitive labels, with 6 facilities across the US and Canada. Minimize shipping by using the plant closest to the point of use. Free LIFETIME extended equipment warranty when using ID Technology labels with our systems.
10. ID Technology Nationwide support network- our PMMI certified technicians are always close by.
